

JOB: DevOps (Cloud & Automation) Engineer (Ref. No. 0185)

LOCATION: Anywhere

CONTRACT TYPE: B2B / Independent Contractor

AVAILABILITY: Long-term / full-time

Lean Street Company is a high-touch tech consulting agency founded on the idea of eliminating waste in product development and creating a process that supports rapid innovation.

We are hard-working, extremely passionate about technology, provide complete transparency and understand how to best collaborate with other teams and businesses.

Our talent is gathered from around the world. To be part of the Lean Street team you have to be more than a top-notch developer - you have to be passionate, assertive in communication, able and eager to walk a mile in the client's and user's shoes, and advocate on their behalf. We encourage lifestyle employment where we offer flexible work schedule as long as you get the job done.

RESPONSIBILITIES:

- + Design and build converging and scalable systems for a fast growing environment
- + Automate Cloud deployments and changes
- + Operate and maintain (Cloud) Linux environments

REQUIRED SKILLS:

- + Ability to work independently and self-manage
- + Experience with Ansible automation
- + Advanced knowledge of Linux administration
- + Advanced knowledge of cloud providers and environments (GCP, AWS, Scaleway)
- + Knowledge of NodeJS
- + Knowledge of Postgresql
- + Experience working with Git, npm, asset pipelines and general JS tooling
- + Experience with Rest APIs – calling them and also developing them in Node
- + Excellent communication skills

BONUS SKILLS:

- + Knowledge of C++
- + Understanding of non-standard architectures
- + Work experience with internationally distributed teams
