**JOB:** Full-Stack Python Developer (Ref. No. 0172)
**LOCATION**: Anywhere
**AVAILABILITY**: Full-time

Lean Street Company is a high-touch tech consulting agency founded on the idea of eliminating waste in product development and creating a process that supports rapid innovation.

We are hard-working, extremely passionate about technology, provide complete transparency and understand how to best collaborate with other teams and businesses.

Our talent is gathered from around the world. To be part of the Lean Street team you have to be more than a top-notch developer - You have to be passionate, assertive in communication, able and eager to walk a mile in the client's and user's shoes, and advocate on their behalf. We encourage lifestyle employment where we offer flexible work schedule as long as you get the job done.

## JOB DESCRIPTION:

You will be working on a new project, built from scratch. You will be responsible for setting up continuous delivery, including the build pipeline and unit test automation.

## GENERAL SKILLS:

+ At least intermediate to senior level of experience
+ Experience using Git
+ Following and setting good development practices (following proper Git flow, unit tests, CI)
+ Good written and spoken communication skills in English
+ Assertive attitude with willingness to spot and solve problems
+ Ability to work in a multicultural / global team environment

## REQUIRED BACKEND SKILLS:

+ Experience in developing modern Django web applications (Python 3) using relational databases (PostgreSQL, MySQL)
+ Experience with Rest APIs – calling them and also developing them with Django REST Framework
+ At least basic understanding of concepts on all layers across the whole system app: linux-based servers, deployment process, web server (nginx)
+ Experience in using Amazon S3

+ Experience in integrating payment processing systems (Stripe, Authorize.Net, Dwolla)
+ Understanding of most fundamental web app security challenges; writing secure applications

## BONUS BACKEND SKILL:

+ At least a basic understanding of AWS, Docker, Redis

## REQUIRED FRONTEND SKILLS:

+ Experience in HTML5 and CSS3
+ Experience in client-side JavaScript

## BONUS FRONTEND SKILLS:

+ Willingness to convert UX designs into HTML/CSS
+ Familiarity with tools such as as Illustrator, Photoshop, InVision
+ At least basic understanding of SEO principles and ensuring that application will adhere to them
+ Familiarity with tools: webpack, SASS, npm/yarn
