JOB: Senior Perl Developer | Job No. 0177
AVAILABILITY: Full-time
LOCATION: 100% Remote

Lean Street Company is a high-touch tech consulting agency founded on the idea of eliminating waste in product development and creating a process that supports rapid innovation.

We are hard-working, extremely passionate about technology, provide complete transparency and understand how to best collaborate with other teams and businesses.

Our talent is gathered from around the world. To be part of the Lean Street team you have to be more than a top-notch developer - You have to be passionate, assertive in communication, able and eager to walk a mile in the client's and user's shoes, and advocate on their behalf. We encourage lifestyle employment where we offer flexible work schedule as long as you get the job done.

JOB DESCRIPTION

As a Backend Developer, you will be working on both development of new features and maintenance of a client's project. The backend code is written in both Perl and Ruby, uses MySQL as its database, and is hosted on AWS.

RESPONSIBILITIES

+ Maintain a medium-to-large Perl codebase
+ Develop new features in that codebase
+ Keep an eye on the project's infrastructure

SKILLS

+ **You are willing and comfortable to work as part of a team**
+ You have excellent spoken and written English skills
+ You want to solve problems first, crank code later
+ You can read code patiently and write readable code
+ You can produce both short-term and long-term solutions to a problem, and make a plan of moving from one to the other
+ You have experience with medium-to-large Perl codebases
+ You know, or are willing to learn quickly, **DBIx::Class** and **Moose**
+ You know at least some **Ruby on Rails**, and can read the code
+ You know **MySQL** on a rather advanced level, and are aware of its limitations

+ You know some **modern Javascript.** This is a backend role, but many things are happening on the edge of the frontend and the backend
+ You can work comfortably with Linux and use **container technologies** (like Docker)
+ You have some experience managing remote servers, and know your way around SSH and Linux administration tools
+ You know and routinely use more than one programming language, and understand weaknesses and limitations of any tool you use

BONUS SKILLS

+ Knowledge of AWS flavors of software and hosted services. Specifically: Aurora, ECS, VPC
+ Knowledge and a willingness to continue learning about cybersecurity
+ Prior experience working in a remote team
